## In the Claims:

- An extrusion process for making pellets of a (Currently Amended) 1. thermoplastic extrudable resin composition comprising a thermoplastic polymer, plasticiser and optionally further additives, the plasticiser comprising a component which is solid at room temperature and a carbohydrate selected from the group consisting of sorbitol, glucitol, mannitol, galactitol, dulcitol, xylitol, erythritol, isomaltutose and isomalt, wherein the process is run at a temperature above the melting point of the plasticiser and below the melting or plastification temperature of the thermoplastic polymer, wherein the temperature of material with an within an extruder is at least 40°C.
- (Cancelled) 2.
- A process according to claim 1, wherein the (Previously Presented) 3. plasticiser is present in the composition in at least 5%.
- (Cancelled) 4.
- (Currently Amended) A process according to claim-4-1, wherein the temperature 5. of the material within the extruder does not exceed a temperature which is 10°C, below the melting or plastification temperature of the thermoplastic polymer at any time.
- (Cancelled) 6.
- A process according to claim 1, wherein the particle (Previously Presented) 7. size of raw materials used is below 2000 µm.
- (Cancelled) 8.

- 9. (Cancelled)
- (Cancelled) 10.
- A process according to claim 1, wherein the 11. (Previously Presented) thermoplastic polymer is water-soluble or water dispersible.
- A process according to claim 11, wherein the (Previously Presented) 12. thermoplastic polymer comprises PVOH or a derivative thereof.
- A process according to claim 1, wherein the (Previously Presented) 13. thermoplastic polymer comprises poly(vinylpyrollidone), poly(acrylic acid), poly(maleic acid), a cellulose derivative, poly(glycolide), poly(glycolic acid), poly(lactides), poly (lactic acid) and copolymers thereof.
- (Cancelled) 14.
- (Cancelled) 15.
- A process according to claim 3, wherein the (Previously Presented) 16. plasticiser is present in the composition in at least 10%.
- A process according to claim 16, wherein the (Previously Presented) 17. plasticiser is present in the composition in at least 15%.
- A process according to claim 5, wherein the (Previously Presented) 18. temperature of the material within the extruder does not exceed a temperature which is 15°C, below the melting or plastification temperature of the thermoplastic polymer at any time.

- A process according to claim 18, wherein the (Previously Presented) **19**. temperature of the material within the extruder does not exceed a temperature which is 30°C, below the melting or plastification temperature of the thermoplastic polymer at any time.
- A process according to claim 18, wherein the (Previously Presented) 20. temperature of the material within the extruder does not exceed a temperature which is 45°C, below the melting or plastification temperature of the thermoplastic polymer at any time.
